Kyle Pham

kylepham.n@gmail.com | (346) 232-1580 | Fort Collins, CO 80526 | https://www.linkedin.com/in/kylephamn

Skills

Programming Languages: C++23, Python3.13, Java23, JavaScript, HTML5, CSS3, C, Node.JS, React.js, MATLAB, R, & Bash
Development Tools: GitHub, JUnitTesting, Amazon Web Services (AWS), Agile PM, Visual Studio Code IDE, PowerShell, Linux, Jupyter Notebook, Excel, optimization, WinSCP, RDP, APIs, Object-Oriented Programming, Scrum Philosophies, Jira, concurrent processing
Languages: Fluent in Vietnamese, business proficient in Korean and Spanish, and learning French
Interpersonal: Complex problem-solving, strong verbal and presentation skills, and ability to manage fast-paced environments

Education

Bachelor of Science in Computer Science, Software Engineering Concentration **May 2026**
Colorado State University - Fort Collins, CO GPA - 3.32

Courses

Big Data, Empirical Software Engineering, Software Engineering, Modern Web Applications, Web Design & Development, Systems Analysis & Design, Algorithms, Operating Systems, Software Development, System Security, Discrete Structures, Data Structures, Linear Algebra, Intro to C++, Java, & Python

Awards

DevNet 2025 Federal Hackathon 1st Place Overall Winner, Reisher Scholarship Recipient,
Bachelor of Science Computer Science Dean's List, Korean Certification of Commendation

Professional Work Experience

Flight Software Engineering Intern - Secret Clearance Littleton, CO
Lockheed Martin Space **May 2025 - Present**

- Engineering production **MATLAB** code empowered by **GitLab** that will analyze & collect data to improve future program flights
- Identified and patched improper **XML** code to correctly populate hundreds of **C** header files using Jira to optimize function calls
- Collaborating on a team of **20+** skilled software engineers to develop quality code for program flight, integrating unclassified code into classified code repositories, and using testing techniques to validate operational integrity

Information Technology Infrastructure Intern Fort Collins, CO
Colorado State University Division of Information Technology **September 2024 - May 2025**

- Manage and optimize server infrastructure to ensure high availability and scalability for organizational applications
- Design and implement network solutions that support seamless enterprise operations and the possibility of future expansion
- Developed an automated quota monitoring system for TrueNAS storage, integrating **Python**, **SQLite**, and **SMTP** email notifications to track dataset usage, enforce thresholds, and alert users, ensuring efficient storage management

Traumatic Brain Injury Research Intern Fort Collins, CO
Colorado State University Translational Neurological Laboratory **June 2024 - August 2024**

- Designed and deployed a **Java** application to clean and interpret de-identified data files for a research study
- Engineered user-friendly **Excel** workbook for clinicians to record and visualize patient data using colorblind friendly UX techniques
- Implemented refactored **JavaScript GitHub** project to refactor for an AMLE algorithm to estimate Rasch Measures using **VB.NET**

Projects

TrueNAS API Quota Warning Script **|** Division of Information Technology, Infrastructure Team | **Python**

- Designed a **Python** script to retrieve datasets from enterprise storage to determine any quota overages and notify clients
- Intentionally set the designated storage threshold to maintain maximized data retrieval performance for end-users
- Leveraged RESTful API to achieve O(1) datastore retrieval with **O(1)** arithmetic to determine quota storage use for user notification

Uncharted AI Model | DevNet 2025 Spring Hackathon | **Python**

- Developed a hybrid model combining DenseNet121 (pretrained with ImageNet) and UNet++ architecture to map roads from data
- Achieved remarkable **99.79%** accuracy through rigorous training and image resampling
- Scored an impressive **0.2770** Test Loss and **0.8497** F1 score in final evaluation

Personal Portfolio Website | Independent Website Project | **HTML5, CSS3, JavaScript | Tailwind**

- Integrated advanced styling glow effects, and modular components to enhance user engagement and maintain design consistency
- Developed a responsive personal website using **HTML**, **CSS**, and **JavaScript**, featuring a dark mode and interactive animations
- Leveraged libraries and local storage for smooth scrolling, 3D tilt effects, and theme persistence across sessions

Involvement Opportunities:

Co-President - Society of Asian Scientists and Engineers - Colorado State University

- Coordinating communication between five executive officers and the advisor, enhancing operational efficiency
- Collaborating with local chapters to foster relationships and share best practices, strengthening community ties
- Secured funding for various academic year events, increasing participation and enhancing student engagement

Flight Software Lead - United States Launch Initiative
General Member - Developer's Network & Association of Computational Machinery
